The original compensation rate for dates of injury 10/2/1976 - 9/30/1977 should already include an increase of 7.65% (1.0765) per the "Krumm" decision. Only the annual adjustments that follow on 10/1 of each year are shown on this chart.																		
10/1/1976	1.06000	1.12360	1.19102	1.26248	1.33823	1.41852	1.50363	1.58047	1.64290	1.72932	1.80610	1.87816	1.98390	2.05592	2.12788	2.20470	2.32486	2.36322

To use this worksheet you must know the date of injury, number of adjustments, and original compensation rate. Find the date of injury in the first column and then multiply the original compensation rate by the number found in the number of adjustments column. For example: date of injury = 12/1/1985 and original compensation rate = \$125.00. The adjusted compensation rate as of 12/1/1989 would be \$125.00 x 1.20756 = \$150.95. This sheet is only to aid in making adjustments to the compensation rate. It is not exact in all cases, but is very close. The actual compensation rate should be determined by the long method: compensation rate x adjustment x adjustment etc.
