| Chapter 8 | | | | | | | | |
| Line # | Rules affected | RFA No. | Brief Title | Proposal and Committee recommendation | Date of Committee review | Plumbing Board action/comments | (A)ccept (R)eject (M)odify | |
| 132 | 801.3.2 | | Walk-In Coolers. | Recommendation - Leave as amended in the 2020 MPC. 801.3.2 Walk-in Coolers. Floor drains shall not be located inside walk-in coolers unless they are specifically required by the licensing authority. Where required, floor drains shall be connected to a separate drainage line discharging into an outside receptor. The flood-level rim of the receptor shall not be less than 6 inches (152 mm) lower than the lowest floor drain. The floor drains shall be trapped and individually vented. Cleanouts shall be provided at 90 degree (1.57 rad) turns and shall be accessibly located. The waste shall discharge through an air gap or air break into a trapped and vented receptor, except that a full-size air gap is required where the indirect waste pipe is under vacuum. | 6.25.2024 | | | |
| 133 | 801.3.3 | | 801.3.3 Food-Handling Fixtures. | Recommendation - Leave as amended in the 2020 MPC. 801.3.3 Food-Handling Fixtures. Cooking ranges, steam kettles, potato peelers, ice cream dipper wells, and similar equipment shall be indirectly connected to the drainage system by means of an air gap. Bins, cooling counters, compartments, and other equipment having drainage connections and used for the storage of unpackaged ice used for human ingestion, or used in direct contact with ready-to-eat food, shall be indirectly connected to the drainage system by means of an air gap. | 6.25.2024 | | | |
| 134 | 801.4 | | 801.4 Bar and Fountain Sink Traps. | Leave as amended in the 2020 MPC. Deleted in its entirety. | 6.25.2024 | | | |
| 135 | 804.2 | | 804.2 Domestic or Culinary Type Fixtures Prohibited as Receptors | Recommendation - Leave as amended in the 2020 MPC. 804.2 Domestic or Culinary Type Fixtures Prohibited as Receptors. No plumbing fixture that is used for domestic or culinary purposes shall be used to receive the discharge of an indirect waste. Exception: Domestic use dishwashers may discharge into a sink, or discharge to a sink tailpiece or food-waste grinder when installed in accordance with Section 807.3. | 6.25.2024 | | | |
| 136 | 807.3 | | 807.3 Domestic Dishwashing Machine | Recommendation - Leave as amended in the 2020 MPC. 807.3 Domestic Dishwashing Machine. No domestic dishwashing machine shall be directly connected to a drainage system or food waste disposer without the use of an approved dishwasher air gap fitting on the discharge side of the dishwashing machine or run the discharge line as high as possible under the countertop, securely fastened. Listed air gaps shall be installed with the flood level (FL) marking at or above the flood level of the sink or drainboard, whichever is higher. | 6.25.2024 | | | |
| 137 | 810.1 | | 810.1 High-Temperature Discharge. | Recommendation - Leave as amended in the 2020 MPC. 810.1 High-Temperature Discharge. No steam pipe shall be directly connected to plumbing or drainage system, nor shall water having a temperature above 140°F (60°C) be discharged under pressure directly into a drainage system. | 6.25.2024 | | | |
| 138 | Table 810.1 | | TABLE 810.1 PIPE CONNECTIONS IN BLOWOFF CONDENSERS AND SUMPS | Leave as amended in the 2020 MPC. Deleted in its entirety. | 6.25.2024 | | | |
| 139 | 811.9 | | 811.9 Waste and Vent. | Recommendation - Leave as amended in the 2020 MPC. 811.9 Waste and Vent. Thermal expansion and contraction compensation shall be provided for every 30 feet of developed horizontal or vertical length of run for thermoplastic piping as shown in Table 313.3.1. | 6.25.2024 | | | |
| 140 | | | 813.1 General | Recommendation: Leave as amended in the 2020 MPC, as follows: 813.1 General. Pipes carrying wastewater from swimming or wading pools, including pool drainage and backwash from filters, water from scum gutter drains and pool deck drains, shall be installed as an indirect waste. Pool deck drains need not be trapped and vented per section 803.1. Pool deck drain piping must be pitched at a minimum of 1/8 inch per foot for pipe sizes 3 inches and larger. Where a pump is used to discharge waste pool water to the drainage system, the pump discharge shall be installed as an indirect waste. | 6.25.2024 | | | |
| 141 142 | 814 814.1 | PB0181 | Condesate Piping | Recommendation - Do not accept RFA PB0181. Leave as amended in the 2020 MPC | 6.25.2024 | | | |
| 142 | 814.1 | | 814.1 Condensate Disposal. | Recommendation - Leave as amended in the 2020 MPC. 814.1 Condensate Disposal. Where discharged into the drainage system, equipment shall drain by means of an indirect waste pipe. | 6.25.2024 | | | |

| 143 | 814.1.1 | | 814.1.1 Condensate Pumps. | Recommendation - Delete in its entirety. 814.1.1 Condensate Pumps. Where approved by the Authority Having Jurisdiction, condensate pumps shall be installed in accordance with the manufacturer's installation instructions. Pump discharge shall rise vertically to a point where it is possible to connect to a gravity condensate drain and discharged to an approved disposal point. Each condensing unit shall be provided with a separate sump and interlocked with the equipment to prevent the equipment from operating during a failure. Separate pumps shall be permitted to connect to a single gravity indirect waste where equipped with check valves and approved by the Authority Having Jurisdiction. | 6.25.2024 | | | | |
| 144 | 814.3 | | 814.3 Condensate Waste Pipe Material and Sizing. | Leave as amended in the 2020 MPC. Deleted in its entirety | 6.25.2024 | | | | |
| 145 | Table 814.3 | | TABLE 814.3MINIMUM CONDENSATE PIPE SIZE | Leave as amended in the 2020 MPC. Deleted in its entirety | 6.25.2024 | | | | |
| 146 | 814.3.1 | | 814.3.1 Cleanouts. | Leave as amended in the 2020 MPC. Deleted in its entirety | 6.25.2024 | | | | |
| 147 | 814.4 | | 814.4 Appliance Condensate Drains. | Recommendation - Leave as amended in the 2020 MPC. 814.4 Appliance Condensate Drains. Condensate drain lines from individual condensing appliances shall be sized as required by the manufacturer's instructions. Condensate drain lines serving more than one appliance shall be approved by the Authority Having Jurisdiction prior to installation. | 6.25.2024 | | | | |
| 148 | 814.5 | | | Recommendation - Leave as amended in the 2020 MPC. 814.5 Point of Discharge. Air-conditioning condensate waste pipes shall connect indirectly to the interior drainage system through an air gap or air break to: (1) properly trapped and vented receptors; (2) the tailpiece of an approved plumbing fixture; or (3) an exterior place of disposal approved by the Minnesota Pollution Control Agency. Condensate waste shall not drain over a public way or in areas causing a nuisance. | 6.25.2024 | | | | |

Ad Hoc Code Review and Rulemaking Committee Chapter 8 (Kee

| | | | | Chapter o (Kee |
|--------|----------------|--|---|--|
| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 1 | | 801.0 General. | | 801.0 General. |
| 2 | | 801.1 Applicability. | Keep as shown in 2024 UPC | 801.1 Applicability. This chapter shall govern the materials, design, and installation of indirect waste piping, receptors, and connections; and provisions for discharge and disposal of condensate wastes, chemical wastes, industrial wastes, and clear water wastes. |
| 3 | | 801.2 Air Gap or Air Break Required. | Keep as shown in 2024 UPC | 801.2 Air Gap or Air Break Required. Indirect waste piping shall discharge into the building drainage system through an air gap or air break as set forth in this code. Where a drainage air gap is required by this code, the minimum vertical distance as measured from the lowest point of the indirect waste pipe or the fixture outlet to the flood-level rim of the receptor shall be not less than 1 inch (25.4 mm). |
| 4 | | 801.3 Food and Beverage Handling Establishments. | Keep as shown in 2024 UPC | 801.3 Food and Beverage Handling Establishments. Establishments engaged in the storage, preparation, selling, serving, processing, or other handling of food and beverage involving the following equipment that requires drainage shall provide indirect waste piping for refrigerators, refrigeration coils, freezers, walk-in coolers, iceboxes, ice-making machines, steam tables, egg boilers, coffee urns and brewers, hot-and-cold drink dispensers, and similar equipment. |
| 5 | | 801.3.1 Size of Indirect Waste Pipes. | Keep as shown in 2024 UPC | 801.3.1 Size of Indirect Waste Pipes. Except for refrigeration coils and ice-making machines, the size of the indirect waste pipe shall be not smaller than the drain on the unit, but shall be not smaller than 1 inch (25 mm), and the maximum developed length shall not exceed 15 feet (4572 mm). Indirect waste pipe for ice-making machines shall be not less than the drain on the unit and in no case less than 3/4 of an inch (20 mm). |

Page 3 of 68

| | | | | Chapter o (Nec |
|--------|----------------|---|---|---|
| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 6 | | 801.5 Connections from Water Distribution System. | Keep as shown in 2024 UPC | 801.5 Connections from Water Distribution System. Indirect waste connections shall be provided for drains, overflows, or relief pipes from potable water pressure tanks, water heaters, boilers, and similar equipment that is connected to the potable water distribution system. Such indirect waste connections shall be made using a water-distribution air gap constructed in accordance with Table 603.3.1. |
| 7 | | 801.6 Sterilizers. | Keep as shown in 2024 UPC | 801.6 Sterilizers. Lines, devices, or apparatus such as stills, sterilizers, and similar equipment requiring waste connections and used for sterile materials shall be indirectly connected using an air gap. Each such indirect waste pipe shall be separately piped to the receptor and shall not exceed 15 feet (4572 mm). Such receptors shall be located in the same room. |
| 8 | | 801.7 Drip or Drainage Outlets. | Keep as shown in 2024 UPC | 801.7 Drip or Drainage Outlets . Appliances, devices, or apparatus not regularly classified as plumbing fixtures, but which have a drip or drainage outlets, shall be permitted to be drained by indirect waste pipes discharging into an open receptor through either an air gap or air break (see Section 801.3.1). |
| 9 | | 802.0 Approvals. | Keep as shown in 2024 UPC | 802.0 Approvals. |
| 10 | | 802.1 General. | Keep as shown in 2024 UPC | 802.1 General. No plumbing fixtures served by indirect waste pipes or receiving discharge therefrom shall be installed until first approved by the Authority Having Jurisdiction. |
| 11 | | 803.0 Indirect Waste Piping. | Keep as shown in 2024 UPC | 803.0 Indirect Waste Piping. |
| 12 | | 803.1 Materials. | Keep as shown in 2024 UPC | 803.1 Materials. Pipe, tube, and fittings conveying indirect waste shall be of such materials and design as to perform their intended function to the satisfaction of the Authority Having Jurisdiction. |

Page 4 of 68

| | | | | Chapter o (Nee |
|--------|----------------|-----------------------------------|---|---|
| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 13 | | 803.2 Copper and Copper Alloys | Keep as shown in 2024 UPC | 803.2 Copper and Copper Alloys. Joints and connections in copper and copper alloy pipe and tube shall be installed in accordance with Section 705.3. |
| 14 | | 803.3 Pipe Size and Length. | Keep as shown in 2024 UPC. | 803.3 Pipe Size and Length. Except as hereinafter provided, the size of indirect waste piping shall be in accordance with other sections of this code applicable to drainage and vent piping. No vent from indirect waste piping shall combine with a sewer-connected vent. Vents from indirect waste piping shall extend separately to the outside air. Indirect wastepipes exceeding 5 feet (1524 mm), but less than 15 feet (4572mm) in length shall be directly trapped, but such traps need not be vented. Indirect waste pipes less than 15 feet (4572 mm) in length shall be not less than the diameter of the drain outlet or tailpiece of the fixture, appliance, or equipment served, and in no case less than 1/2 of an inch (15 mm). Angles and changes of direction in such indirect waste pipes shall be provided with cleanouts to permit flushing and cleaning. |
| 15 | | 804.0 Indirect Waste | Keep as shown in | 804.0 Indirect Waste Receptors. |
| 15 | | Receptors. | 2024 UPC. | |

| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 16 | | 804.1 Standpipe Receptors. | Keep as shown in 2024 UPC. | 804.1 Standpipe Receptors. Plumbing fixtures or other receptors receiving the discharge of indirect waste pipes shall be approved for the use proposed and shall be of such shape and capacity as to prevent splashing or flooding and shall be located where they are readily accessible for inspection and cleaning. No standpipe receptor for a clothes washer shall extend more than 30 inches (762 mm), or not less than 18 inches (457 mm) above its trap weir. No trap for a clothes washer standpipe receptor shall be installed below the floor, but shall be roughed in not less than 6 inches (152 mm) and not more than 18 inches (457 mm) above the floor. No indirect waste receptor shall be installed in a toilet room, closet, cupboard, or storeroom, or in a portion of a building not in general use by the occupants thereof; except standpipes for clothes washers shall be permitted to be installed in toilet and bathroom areas where the clothes washer is installed in the same room. |
| 17 | | 805.0 Pressure Drainage | Keep as shown in | 805.0 Pressure Drainage Connections. |
| 17 | | Connections. | 2024 UPC. | |
| 18 | | 805.1 General. | Keep as shown in 2024 UPC. | 805.1 General. Indirect waste connections shall be provided for drains, overflows, or relief vents from the water supply system, and no piping or equipment carrying wastes or producing wastes or other discharges under pressure shall be directly connected to a part of the drainage system. The preceding shall not apply to an approved sump pump or to an approved pressure-wasting plumbing fixture or device where the Authority Having Jurisdiction has been satisfied that the drainage system is adequately sized to accommodate the anticipated discharge thereof. |
| 19 | | 806.0 Sterile Equipment. | Keep as shown in 2024 UPC. | 806.0 Sterile Equipment. |
| 20 | | 806.1 General. | Keep as shown in 2024 UPC. | 806.1 General. Appliances, devices, or apparatus such as stills, sterilizers, and similar equipment requiring water and waste and used for sterile materials shall be drained through an air gap. Page 6 of 68 |

| | | | Chapter 8 (Kee |
|----------------|--------------------------------------|---|--|
| Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| | 807.0 Appliances. | Keep as shown in 2024 UPC. | 807.0 Appliances. |
| | 807.1 Non-Classed Apparatus. | Keep as shown in 2024 UPC. | 807.1 Non-Classed Apparatus. Commercial dishwashing machines, silverware washing machines, and other appliances, devices, equipment, or other apparatus not regularly classed as plumbing fixtures, which are equipped with pumps, drips, or drainage outlets, shall be permitted to be drained by indirect waste pipes discharging through an air break into an approved type of open receptor. |
| | 807.2 Undiluted Condensate Waste. | Keep as shown in 2024 UPC. | 807.2 Undiluted Condensate Waste. Where undiluted condensate waste from a fuel-burning condensing appliance is discharged into the drainage system, the material in the drainage system shall be cast-iron, galvanized iron, plastic, or other materials approved for this use. |
| | | Keep as shown in 2024 UPC. | Exceptions: (1) Where the above condensate is discharged to an exposed fixture tailpiece and trap, such tailpiece and trap shall be permitted to be a copper alloy. |
| | | Keep as shown in 2024 UPC. | (2) Materials approved in Section 701.0 shall be permitted to be used where data is provided that the condensate waste is adequately diluted. |
| | 808.0 Cooling Water. | Keep as shown in 2024 UPC. | 808.0 Cooling Water. |
| | 808.1 General. | Keep as shown in 2024 UPC. | 808.1 General. Where permitted by the Authority Having Jurisdiction, clean running water used exclusively as a cooling medium in an appliance, device, or apparatus shall be permitted to discharge into the drainage system through the inlet side of a fixture trap in the event that a suitable fixture is not available to receive such discharge. Such trap connection shall be by means of a pipe connected to the inlet side of an approved fixture trap, the upper end terminating in a funnel shaped receptacle set adjacent, and not less than 6 inches (152mm) above the overflow rim of the fixture. Page 7 of 68 |
| | Rules affected | 807.1 Non-Classed Apparatus. 807.2 Undiluted Condensate Waste. | Rules affected Brief Title Committee recommendation Keep as shown in 2024 UPC. 807.1 Non-Classed Apparatus. Keep as shown in 2024 UPC. |

| | | | | Chapter o (Nee |
|--------|----------------|--|---|---|
| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 28 | | 809.0 Drinking Fountains. | Keep as shown in 2024 UPC. | 809.0 Drinking Fountains. |
| 29 | | 809.1 General. | Keep as shown in 2024 UPC. | 809.1 General. Drinking fountains shall be permitted to be installed with indirect wastes through an air break. |
| 30 | | 810.0 Steam and Hot Water Drainage Condensers and Sumps. | Keep as shown in 2024 UPC. | 810.0 Steam and Hot Water Drainage Condensers and Sumps. |
| 31 | | 810.2 Sumps, Condensers, and Intercepting Tanks. | Keep as shown in 2024 UPC. | 810.2 Sumps, Condensers, and Intercepting Tanks. Sumps, condensers, or intercepting tanks that are constructed of concrete shall have walls and bottom, not less than 4 inches(102 mm) in thickness, and the inside shall be cement plastered not less than 1/2 of an inch (12.7 mm) in thickness. Condensers constructed of metal shall be not less than No. 12 U.S.standard gauge (0.109 inch) (2.77 mm), and such metal condensers shall be protected from external corrosion by an approved bituminous coating. |
| 32 | | 810.3 Cleaning. | Keep as shown in 2024 UPC. | 810.3 Cleaning. Sumps and condensers shall be provided with suitable means of access for cleaning and shall contain a volume of not less than twice the volume of water removed from the boiler or boilers connected to it where the normal water level of such boiler or boilers is reduced not less than 4 inches (102 mm). |
| 33 | | 810.4 Strainers. | Keep as shown in 2024 UPC. | 810.4 Strainers. An indirect waste interceptor is receiving discharge-containing particles that would clog the receptor drain shall have a readily removable beehive strainer. |
| 34 | | 811.0 Chemical Wastes. | Keep as shown in 2024 UPC. | 811.0 Chemical Wastes. |

Page 8 of 68

| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
|--------|----------------|-------------------------|---|--|
| 35 | | 811.1 Pretreatment | Keep as shown in 2024 UPC. | 811.1 Pretreatment. Chemical or liquid industrial wastes that are likely to damage or increase maintenance costs on the sanitary sewer system, detrimentally affect sewage treatment or contaminate surface or subsurface waters shall be pretreated to render them innocuous before discharge into a drainage system. Detailed construction documents of the pretreatment facilities shall be required by the Authority Having Jurisdiction. Piping conveying industrial, chemical, or process wastes from their point of origin to sewer-connected pretreatment facilities shall be of such material and design as to adequately perform its intended function to the satisfaction of the Authority Having Jurisdiction. Drainage discharge piping from pretreatment facilities or interceptors shall be in accordance with standard drainage installation procedures. Copper or copper alloy tube shall not be used for chemical or industrial wastes as defined in this section. |
| 36 | | | Keep as shown in 2024 UPC. | 811.2 Waste and Vent Pipes. Each waste pipe receiving or intended to receive the discharge of a fixture into which acid or corrosive chemical is placed, and each vent pipe connected thereto, shall be constructed of chlorinated polyvinyl chloride(CPVC), polypropylene (PP), polyvinylidene fluoride(PVDF), chemical-resistant glass, high-silicon iron pipe, or lead pipe with a wall thickness of not less than 1/8 of an inch(3.2 mm); an approved type of ceramic glazed or unglazed vitrified clay; or other approved corrosion-resistant materials.CPVC pipe and fittings shall comply with ASTM F2618.PP pipe and fittings shall comply with ASTM F1412 or CSAB181.3. PVDF pipe and fittings shall comply with ASTMF1673 or CSA B181.3. Chemical-resistant glass pipe and fittings shall comply with ASTM C1053. High-silicon iron pipe and fittings shall comply with ASTM A861. |
| 37 | | 811.3 Joining Materials | Keep as shown in 2024 UPC. | 811.3 Joining Materials. Joining materials shall be of approved type and quality. |

|--------|----------------|---|---|---|
| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 48 | | | Keep as shown in 2024 UPC. | (1) A water level detecting device that will shut off the equipment or appliance in the event the primary drain is blocked. Such detecting device shall be in accordance with the manufacturer's installation instructions. |
| 49 | | | Keep as shown in 2024 UPC. | (2) An additional watertight pan of corrosion-resistant material, with a separate drain line, installed beneath the cooling coil, unit, or the appliance to catch the overflow condensate due to a clogged primary condensate drain. |
| 50 | | | Keep as shown in 2024 UPC. | (3) An additional separate drain line at a level that is higher than the primary drain line connection of the drain pan. |
| 51 | | | Keep as shown in 2024 UPC. | (4) An additional watertight pan of corrosion-resistant material with a water level detection device installed beneath the cooling coil, unit, or the appliance to catch the overflow condensate due to a clogged primary condensate drain and to shut off the equipment. |
| 52 | | | Keep as shown in 2024 UPC. | The additional pan or the additional drain line connection shall be provided with a drainpipe of not less than 3/4 of an inch (20 mm) nominal pipe size, discharging at a point that is readily observed. |
| 53 | | 814.2.1 Protection of Appurtenances | Keep as shown in 2024 UPC. | 814.2.1 Protection of Appurtenances. Where insulation or appurtenances are installed where damage is capable of resulting from a condensate drain pan overfill, such installations shall occur above the rim of the drain pan with supports. Where the supports are in contact with the condensate waste, the supports shall be of approved corrosion-resistant material. |
| 54 | | 814.6 Condensate Waste from Air-Conditioning Coils. | Keep as shown in 2024 UPC. | 814.6 Condensate Waste from Air-Conditioning Coils. Where the condensate waste from air-conditioning coils discharges by direct connection to a lavatory tailpiece or to an approved accessible inlet on a bathtub overflow, the connection shall be located in the area controlled by the same person controlling the air-conditioned space. |

| 801.5 Connections from Water Distribution System. Indirect waste connections shall be provided for drains, overflows, or relief pipes from potable water pressure tanks, water heaters, boilers, and similar equipment that is connected to the potable water distribution system. Such indirect waste connections shall be made using a water-distribution air gap constructed in accordance with Table 603.3.1. | TRUE | 6.25.2024 | | |
| 801.6 Sterilizers. Lines, devices, or apparatus such as stills, sterilizers, and similar equipment requiring waste connections and used for sterile materials shall be indirectly connected using an air gap. Each such indirect waste pipe shall be separately piped to the receptor and shall not exceed 15 feet (4572 mm). Such receptors shall be located in the same room. | TRUE | 6.25.2024 | | |
| 801.7 Drip or Drainage Outlets. Appliances, devices, or apparatus not regularly classified as plumbing fixtures, but which have a drip or drainage outlets, shall be permitted to be drained by indirect waste pipes discharging into an open receptor through either an air gap or air break (see Section 801.3.1). | TRUE | 6.25.2024 | | |
| 802.0 Approvals. | TRUE | 6.25.2024 | | |
| 802.1 General. No plumbing fixtures served by indirect waste pipes or receiving discharge therefrom shall be installed until first approved by the Authority Having Jurisdiction. | TRUE | 6.25.2024 | | |
| 803.0 Indirect Waste Piping. | TRUE | 6.25.2024 | | |
| 803.1 Materials. Pipe, tube, and fittings conveying indirect waste shall be of such materials and design as to perform their intended function to the satisfaction of the Authority Having Jurisdiction. | TRUE | 6.25.2024 | | |

| 803.2 Copper and Copper Alloys. Joints and connections in | | 6.25.2024 | | |
| copper and copper alloy pipe and tube shall be installed in | TRUE | | | |
| accordance with Section 705.3. | | | | |
| 803.3 Pipe Size and Length. Except as hereinafter provided, the size of indirect waste piping shall be in accordance with other sections of this code applicable to drainage and vent piping. No vent from indirect waste piping shall combine with a sewer-connected vent, but shall extend separately to the outside air. Indirect waste pipes exceeding 5 feet (1524mm), but less than 15 feet (4572 mm) in length shall be directly trapped, but such traps need not be vented. Indirect waste pipes less than 15 feet (4572 mm) in length shall be not less than the diameter of the drain outlet or tailpiece of the fixture, appliance, or equipment served, and in no case less than 1/2 of an inch (15 mm). Angles and changes of direction in such indirect waste pipes shall be provided with cleanouts to permit flushing and cleaning. | FALSE | 6.25.2024 | | |
| 804.0 Indirect Waste Receptors. | TRUE | 6.25.2024 | | |

|--|-------|-----------------------------|--------------------------------|-----------------------------------|
| 804.1 Standpipe Receptors. Plumbing fixtures or other receptors receiving the discharge of indirect waste pipes shall be approved for the use proposed and shall be of such shape and capacity as to prevent splashing or flooding and shall be located where they are readily accessible for inspection and cleaning. No standpipe receptor for a clothes washer shall extend more than 30 inches (762 mm), or not less than 18 inches (457 mm) above its trap. No trap for a clothes washer standpipe receptor shall be installed below the floor, but shall be roughed in not less than 6 inches (152 mm) and not more than 18 inches (457 mm) above the floor. No indirect waste receptor shall be installed in a toilet room, closet, cupboard, or storeroom, or in a portion of a building not in general use by the occupants thereof; except standpipes for clothes washers shall be permitted to be installed in toilet and bathroom areas where the clothes washer is installed in the same room. | FALSE | 6.25.2024 | | |
| 805.0 Pressure Drainage Connections. | TRUE | 6.25.2024 | | |
| 805.1 General. Indirect waste connections shall be provided for drains, overflows, or relief vents from the water supply system, and no piping or equipment carrying wastes or producing wastes or other discharges under pressure shall be directly connected to a part of the drainage system. The preceding shall not apply to an approved sump pump or to an approved pressure-wasting plumbing fixture or device where the Authority Having Jurisdiction has been satisfied that the drainage system is adequately sized to accommodate the anticipated discharge thereof. | TRUE | 6.25.2024 | | |
| 806.0 Sterile Equipment. | TRUE | 6.25.2024 | | |
| 806.1 General. Appliances, devices, or apparatus such as stills, sterilizers, and similar equipment requiring water and waste and used for sterile materials shall be drained through an air gap. | TRUE | 6.25.2024 Pa | ge 16 of 68 | |

| 811.1 Pretreatment . Chemical or liquid industrial wastes that are likely to damage or increase maintenance costs on the sanitary sewer system, detrimentally affect sewage treatment or contaminate surface or subsurface waters shall be pretreated to render them innocuous before discharge into a drainage system. Detailed construction documents of the pretreatment facilities shall be required by the Authority Having Jurisdiction. Piping conveying industrial, chemical, or process wastes from their point of origin to sewer-connected pretreatment facilities shall be of such material and design as to adequately perform its intended function to the satisfaction of the Authority Having Jurisdiction. Drainage discharge piping from pretreatment facilities or interceptors shall be in accordance with standard drainage installation procedures. Copper or copper alloy tube shall not be used for chemical or industrial wastes as defined in this section. | TRUE | 6.25.2024 | | |
| 811.2 Waste and Vent Pipes. Each waste pipe receiving or intended to receive the discharge of a fixture into which acid or corrosive chemical is placed, and each vent pipe connected thereto, shall be constructed of chlorinated polyvinyl chloride(CPVC), polypropylene (PP), polyvinylidene fluoride(PVDF), chemical-resistant glass, high-silicon iron pipe, or lead pipe with a wall thickness of not less than 1/8 of an inch(3.2 mm); an approved type of ceramic glazed or unglazed vitrified clay; or other approved corrosion-resistant materials.CPVC pipe and fittings shall comply with ASTM F2618.PP pipe and fittings shall comply with ASTM F1412 or CSAB181.3. PVDF pipe and fittings shall comply with ASTMF1673 or CSA B181.3. Chemical-resistant glass pipe and fittings shall comply with ASTM C1053. High-silicon iron pipe and fittings shall comply with ASTM A861. | TRUE | 6.25.2024 | | |
| 811.3 Joining Materials . Joining materials shall be of approved type and quality. | TRUE | 6.25.2024 | | |

Traps for island sinks and similar equipment shall be roughed in above the floor and shall be permitted to be vented by extending the vent as high as possible, but not less than the drainboard height and then returning it downward and connecting it to the horizontal sink drain immediately downstream from the vertical fixture drain. The return vent shall be connected to the horizontal drain through an approved drainage an approved drainage wye branch fitting and shall, in addition, be provided with a foot vent taken off the vertical fixture vent by means of an approved drainage fitting approved drainage fitting approved drainage fitting approved drainage fitting to the nearest partition and then through the roof to the open air, or shall be permitted to be connected to other vents at a point not less than 6 inches (152 mm) above the flood-level rim of the fixtures served. Drainage fittings shall be used on the vent below the floor level, and a slope of not less than 1/4 inch per foot (20.8 mm/m) back to the drain shall be maintained. The return bend used under the drainboard shall be a one-piece fitting or an assembly of a 45 degree (0.79 rad), a 90 degree (1.57 rad), and a 45 degree (0.79 rad) elbow in the order named. Pipe sizing shall be as elsewhere required in this code. The island sink drain, upstream of the returned vent, shall serve no other fixtures. An accessible cleanout shall be installed in the vertical portion of the foot vent. | | | | |

| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC |
| 11 | | 903.2.2 Prohibited Use. | Keep as shown in 2024 UPC. | 903.2.2 Prohibited Use. Copper or copper alloy tube shall not be used for chemical or industrial wastes as defined in Section 811.0. |
| 12 | | 903.2.3 Marking. | Keep as shown in 2024 UPC. | 903.2.3 Marking. Copper or copper alloy tubing, in addition to the required incised marking, shall be marked in accordance with either ASTM B306 or ASTM B88.The colors shall be Type K, green; Type L, blue; Type M, red; and Type DWV, yellow. |
| 13 | | 903.3 Changes in Direction. | Keep as shown in 2024 UPC. | 903.3 Changes in Direction. Changes in the direction of vent piping shall be made by the appropriate use of approved fittings, and no such pipe shall be strained or bent. Burred ends shall be reamed to the full bore of the pipe. |
| 14 | | 904.0 Size of Vents. | | 904.0 Size of Vents. |
| 15 | | 904.1 Size. | Keep as shown in 2024 UPC. | 904.1 Size. The size of vent piping shall be determined from its length and the total number of fixture units connected thereto, in accordance with Table 703.2. The diameter of an individual vent shall be not less than 11/4 inches (32 mm) nor less than one-half the diameter of the drain to which it is connected. In addition, the drainage piping of each building and each connection to a public sewer or a private sewage disposal system shall be vented by means of one or more vent pipes, the aggregate cross-sectional area of which shall be not less than that of the largest required building sewer as determined from Table 703.2. Vent pipes from fixtures located upstream from pumps, ejectors, backwater valves, or other devices that obstruct the free flow of air and other gases between the building sewer and the outside atmosphere shall not be used for meeting the cross-sectional area venting requirements of this section. |

| Line # | Rules | Brief Title | Proposal and Committee | 2024 UPC | |
| 20 | affected | 21.3. 1.6.0 | recommendation | | |
| 34 | | 907.2 Yoke Vent. | Keep as shown in 2024 UPC. | 907.2 Yoke Vent. The yoke vent connection to the vent stack shall be placed not less than 42 inches (1067 mm) above the floor level, and the yoke vent connection to the drainage stack shall be using a wye-branch fitting placed below the lowest drainage branch connection serving that floor. | |
| 35 | | 908.0 Wet Venting. | | 908.0 Wet Venting. | |
| 36 | | 908.1 Vertical Wet Venting. | Keep as shown in 2024 UPC. | 908.1 Vertical Wet Venting. Wet venting is limited to vertical drainage piping receiving the discharge from the trap arm of one and two fixture unit fixtures that also serves as a vent not exceeding four fixtures. Wetvented fixtures shall be within the same story; provided, further, that fixtures with a continuous vent discharging into a wet vent shall be within the same story as the wet-vented fixtures. No wet vent shall exceed 6 feet (1829 mm) in developed length. | |
| 37 | | 908.1.1 Size. | Keep as shown in 2024 UPC. | 908.1.1 Size. The vertical piping between two consecutive inlet levels shall be considered a wet-vented section. Each wet-vented section shall be not less than one pipe size exceeding the required minimum waste pipe size of the upper fixture or shall be one pipe size exceeding the required minimum pipe size for the sum of the fixture units served by such wet-vented section, whichever is larger, but in no case less than 2 inches (50mm) in diameter. | |
| 38 | | 908.1.2 Vent Connection | Keep as shown in 2024 UPC. | 908.1.2 Vent Connection. Common vent sizing shall be the sum of the fixture units served but, in no case, smaller than the minimum vent pipe size required for a fixture served, or by Section 904.0. | |
| 39 | | 908.2 Horizontal Wet Venting for a Bathroom Group. | Keep as shown in 2024 UPC. | 908.2 Horizontal Wet Venting for a Bathroom Group. A bathroom group located on the same floor level shall be permitted to be vented by a horizontal wet vent where all of the conditions of Section 908.2.1 through Section 908.2.5 are met. | |

|--------|-------------------|----------------------------------|---|--|
| 66 | | 911.5 Additional Fixtures. | Keep as shown in 2024 UPC. | 911.5 Additional Fixtures. Fixtures, other than the circuit vented fixtures, are permitted to discharge to the horizontal branch drain. Such fixtures shall be located on the same floor as the circuit-vented fixtures and shall be either individually or common vented. |
| 67 | | 912.0 Engineered Vent System. | | 912.0 Engineered Vent System. |
| 68 | | 912.1 General. | Keep as shown in 2024 UPC. | 912.1 General. The design and sizing of a vent system shall be permitted to be determined by accepted engineering practices. The system shall be designed by a registered design professional and approved in accordance with Section 301.5. |
| 69 | | 912.2 Minimum Requirements. | Keep as shown in 2024 UPC. | 912.2 Minimum Requirements. An engineered vent system shall provide protection of the trap seal in accordance with Section 901.3. |

Page 33 of 68

024 UPC Recommendations to the Board 024 UPC)

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|--|--------------------------------|------------------------------------|----------------------------------|
| | 8/7/2024 | | |
| 901.0 General. | 8/7/2024 | | |
| 901.1 Applicability. This chapter shall govern the materials, design, and installation of plumbing vent systems. | 8/7/2024 | | |
| 901.2 Vents Required. Each plumbing fixture trap, except as otherwise provided in this code, shall be protected against siphonage and backpressure, and air circulation shall be ensured throughout all parts of the drainage system by means of vent pipes installed in accordance with the requirements of this chapter and as otherwise required by this code. | 8/7/2024 | | |
| 901.3 Trap Seal Protection. The vent system shall be designed to prevent a trap seal from being exposed to a pressure differential that exceeds 1 inch water column (0.24 kPa)on the outlet side of the trap. | 8/7/2024 | | |
| 902.0 Vents Not Required. | 8/7/2024 | | |
| 902.1 Interceptor. Vent piping shall be permitted to be omitted on an interceptor where such interceptor acts as a primary settling tank and discharges through a horizontal indirect waste pipe into a secondary interceptor. The second interceptor shall be properly trapped and vented. | 8/7/2024 | | |
| 903.0 Materials. | 8/7/2024 | | |
| 903.2 Use of Copper or Copper Alloy Tubing. Copper or copper alloy tube for underground drainage and vent piping shall have a weight of not less than that of copper or copper alloy drainage tube type DWV. | 8/7/2024 | | |
| 903.2.1 Aboveground. Copper or copper alloy tube for aboveground drainage and vent piping shall have a weight of not less than that of copper or copper alloy drainage tube type DWV. | 8/7/2024 | | |

Page 34 of 68

024 UPC Recommendations to the Board 024 UPC)

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|---|--------------------------------|------------------------------------|----------------------------------|
| 903.2.2 Prohibited Use. Copper or copper alloy tube shall not be used for chemical or industrial wastes as defined in Section 811.0. | 8/7/2024 | | |
| 903.2.3 Marking. Copper or copper alloy tubing, in addition to the required incised marking, shall be marked in accordance with either ASTM B306 or ASTM B88.The colors shall be Type K, green; Type L, blue; Type M, red; and Type DWV, yellow. | 8/7/2024 | | |
| 903.3 Changes in Direction. Changes in the direction of vent piping shall be made by the appropriate use of approved fittings, and no such pipe shall be strained or bent. Burred ends shall be reamed to the full bore of the pipe. | 8/7/2024 | | |
| 904.0 Size of Vents. | 8/7/2024 | | |
| 904.1 Size. The size of vent piping shall be determined from its length and the total number of fixture units connected thereto, in accordance with Table 703.2. The diameter of an individual vent shall be not less than 11/4 inches (32 mm) nor less than one-half the diameter of the drain to which it is connected. In addition, the drainage piping of each building and each connection to a public sewer or a private sewage disposal system shall be vented by means of one or more vent pipes, the aggregate cross-sectional area of which shall be not less than that of the largest required building sewer as determined from Table 703.2. Vent pipes from fixtures located upstream from pumps, ejectors, backwater valves, or other devices that obstruct the free flow of air and other gases between the building sewer and the outside atmosphere shall not be used for meeting the cross-sectional area venting requirements of this section. | 8/7/2024 | | |

Page 35 of 68

024 UPC Recommendations to the Board 024 UPC)

| | Date of | Disserbing Record Action / | (A)ccept |
|---|-----------|------------------------------------|----------|
| 2020 MPC 4714 | Committee | Plumbing Board Action/ comments | (R)eject |
| | review | | (M)odify |
| Exception: Where connected to a common building sewer, the drainage | 8/7/2024 | | |
| piping of two or more buildings located on the same lot and under one | | | |
| ownership shall be permitted to be vented by means of piping sized in | | | |
| accordance with Table 703.2, provided the aggregate cross-sectional | | | |
| area of vents is not less than that of the largest required common | | | |
| building sewer. | | | |
| 904.2 Length. Not more than one-third of the total permitted length, in | 8/7/2024 | | |
| accordance with Table 703.2, of a minimum sized vent shall be installed | | | |
| in a horizontal position. Exception: Where a minimum-sized vent is | | | |
| increased one pipe size for its entire length, the maximum length | | | |
| limitation shall not apply. | | | |
| 905.0 Vent Pipe Grades and Connections. | 8/7/2024 | | |
| | | | |
| 905.1 Grade. Vent and branch vent pipes shall be free from drops or | 8/7/2024 | | |
| sags, and each such vent shall be level or shall be so graded and | | | |
| connected as to drip back by gravity to the drainage pipe it serves. | | | |
| 905.2 Horizontal Drainage Pipe. Where vents connect toa horizontal | 8/7/2024 | | |
| drainage pipe, each vent pipe shall have its invert taken off above the | | | |
| drainage centerline of such pipe downstream of the trap being served. | | | |
| | | | |
| 905.4 Roof Termination. Vent pipes shall extend undiminished in size | 8/7/2024 | | |
| above the roof, or shall be reconnected with soil or waste vent of the | | | |
| proper size. | | | |
| 905.5 Location of Opening. The vent pipe opening from soil or waste | 8/7/2024 | | |
| pipe, except for water closets and similar fixtures, shall not be below | | | |
| the weir of the trap. | | | |
| 905.6 Common Vertical Pipe. Two fixtures shall be permitted to be | 8/7/2024 | | |
| served by a common vertical pipe where each such fixture wastes | _ | | |
| separately into an approved double fitting having inlet openings at the | | | |
| same level. | | | |
| 906.0 Vent Termination. | 8/7/2024 | | |
| - | - | 2 2C -f CO | |

Page 36 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|---|--------------------------------|------------------------------------|----------------------------------|
| 906.2 Clearance. Each vent shall terminate not less than 10 feet (3048 mm) from, or not less than 3 feet (914 mm)above, an openable window, door, opening, air intake, or vent shaft, or not less than 3 feet (914 mm) in every direction from lot line, alley and street excepted. | 8/7/2024 | | |
| 906.4 Outdoor Installations. Vent pipes for outdoor installations shall extend not less than 10 feet (3048 mm)above the surrounding ground and shall be securely supported. | 8/7/2024 | | |
| 906.5 Joints. Joints at the roof around vent pipes shall beamed watertight by the use of approved flashings or flashing material. | 8/7/2024 | | |
| 906.6 Lead. (See Table 1701.1) Sheet lead shall comply with the following: | 8/7/2024 | | |
| (1) For safe pans – not less than 4 pounds per square foot(lb/ft2) (19 kg/m2) or $1/16$ of an inch (1.6 mm) thick | 8/7/2024 | | |
| (2) For flashings or vent terminals – not less than 3 lb/ft2 (15kg/m2) or 0.0472 of an inch (1.2 mm) thick. | 8/7/2024 | | |
| (3) Lead bends and lead traps shall be not less than $1/8$ of an inch (3.2 mm) in wall thickness. | 8/7/2024 | | |
| 907.0 Vent Stacks and Relief Vents. | 8/7/2024 | | |
| 907.1 Drainage Stack. Each drainage stack that extends 10 or more stories shall be served by a parallel vent stack, which shall extend undiminished in size from its upper terminal and connect to the drainage stack at or immediately below the lowest fixture drain. Each such vent stack shall also be connected to the drainage stack at each fifth floor, counting down from the uppermost fixture drain, using awoke vent, the size of which shall be not less in diameter than either the drainage or the vent stack, whichever is smaller. | 8/7/2024 | | |

Page 37 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|--|--------------------------------|------------------------------------|----------------------------------|
| 907.2 Yoke Vent. The yoke vent connection to the vent stack shall be placed not less than 42 inches (1067 mm) above the floor level, and the yoke vent connection to the drainage stack shall be using a wye-branch fitting placed below the lowest drainage branch connection serving that floor. | 8/7/2024 | | |
| 908.0 Wet Venting. 908.1 Vertical Wet Venting. Wet venting is limited to vertical drainage piping receiving the discharge from the trap arm of one and two fixture unit fixtures that also serves as a vent not exceeding four fixtures. Wetvented fixtures shall be within the same story; provided, further, that fixtures with a continuous vent discharging into a wet vent shall be within the same story as the wet-vented fixtures. No wet vent shall exceed 6 feet (1829 mm) in developed length. | 8/7/2024 8/7/2024 | | |
| 908.1.1 Size. The vertical piping between two consecutive inlet levels shall be considered a wet-vented section. Each wet-vented section shall be not less than one pipe size exceeding the required minimum waste pipe size of the upper fixture or shall be one pipe size exceeding the required minimum pipe size for the sum of the fixture units served by such wet-vented section, whichever is larger, but in no case less than 2 inches (50mm) in diameter. | 8/7/2024 | | |
| 908.1.2 Vent Connection. Common vent sizing shall be the sum of the fixture units served but, in no case, smaller than the minimum vent pipe size required for a fixture served, or by Section 904.0. | 8/7/2024 | | |
| 908.2 Horizontal Wet Venting for a Bathroom Group. A bathroom group located on the same floor level shall be permitted to be vented by a horizontal wet vent where all of the conditions of Section 908.2.1 through Section 908.2.5are met. | 8/7/2024 | | |

Page 38 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|--|--------------------------------|------------------------------------|----------------------------------|
| 908.2.1 Vent Connection. The dry vent connection to the wet vent shall be an individual vent for the bidet, shower, or bathtub. One or two vented lavatory(s) shall be permitted to serve as a wet vent for a bathroom group. Only one wet-vented fixture drain or trap arm shall discharge upstream of the dry-vented fixture drain connection. Dry vent connections to the horizontal wet vent shall be in accordance with Section 905.2 and Section905.3. | 8/7/2024 | | |
| 908.2.2 Size. The wet vent shall be sized based on the fixture unit discharge into the wet vent. The wet vent shall be not less than 2 inches (50 mm) in diameter for 4drainage fixture units (dfu) or less, and not less than 3inches (80 mm) in diameter for 5 dfu or more. The dry vent shall be sized in accordance with Table 702.1 and Table 703.2 based on the total fixture units discharging into the wet vent. | 8/7/2024 | | |
| 908.2.3 Trap Arm. The length of the trap arm shall not exceed the limits in Table 1002.2. The trap size shall be in accordance with Section 1003.3. The vent pipe opening from the horizontal wet vent, except for water closets and similar fixtures, shall not be below the weir of the trap. | 8/7/2024 | | |
| 908.2.4 Water Closet. The water closet fixture drain or trap arm connection to the wet vent shall be downstream of fixture drain or trap arm connections to the horizontal wet vent. | 8/7/2024 | | |
| 908.2.5 Additional Fixtures. Additional fixtures shall discharge downstream of the wet vent system and be conventionally vented. Only the fixtures within the bathroom group shall connect to the wet-vented horizontal branch. | 8/7/2024 | | |
| 909.0 Special Venting for Island Fixtures. | 8/7/2024 | | |
| 910.0 Combination Waste and Vent Systems. | 8/7/2024 | | |

Page 39 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|--|--------------------------------|------------------------------------|----------------------------------|
| 910.1 Where Permitted. Combination waste and vent systems shall be permitted where structural conditions preclude the installation of conventional systems as otherwise prescribed by this code. | 8/7/2024 | | |
| 910.2 Approval. Construction documents for each combination waste and vent system shall first be approved by the Authority Having Jurisdiction before a portion of such system is installed. | 8/7/2024 | | |
| 910.3 Vents. Each combination waste and vent system, as defined in Chapter 2, shall be provided with a vent or vents adequate to ensure free circulation of air. A branch exceeding15 feet (4572 mm) in length shall be separately vented in an approved manner. The area of a vent installed in a combination waste and vent system shall be not less than one-half the inside cross-sectional area of the drain pipe served. The vent connection shall be downstream of the uppermost fixture. | 8/7/2024 | | |
| 910.4 Size. Each waste pipe and each trap in such a system shall be not less than two pipe sizes exceeding the sizes required by Chapter 7 of this code, and not less than two pipe sizes exceeding a fixture tailpiece or connection. | 8/7/2024 | | |
| 910.5 Vertical Waste Pipe. No vertical waste pipe shall be used in such a system, except the tailpiece or connection between the outlet of a plumbing fixture and the trap. Such tailpieces or connections shall be as short as possible, and in no case shall exceed 2 feet (610 mm). | 8/7/2024 | | |
| Exception: Branch lines shall be permitted to have 45 degree(0.79 rad) vertical offsets. | 8/7/2024 | | |
| 910.6 Cleanouts. An accessible cleanout shall be installed in each vent for the combination waste and vent system. Cleanouts shall not be required on a wet-vented branch serving a single trap where the fixture tailpiece or connection is not less than 2 inches (50 mm) in diameter and provides ready access for cleaning through the trap. | 8/7/2024 | age 40 of 68 | |

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|---|--------------------------------|------------------------------------|----------------------------------|
| 910.7 Fixtures. No water closet or urinal shall be installed on such a system. Other one, two, or three unit fixtures remotely located from the sanitary system and adjacent to a combination waste and vent system shall be permitted to be connected to such system in the conventional manner by means of waste and vent pipes of regular sizes, providing that the two pipe size increase required in Section 910.4 is based on the total fixture unit load connected to the system. See Appendix B of this code for explanatory notes on the design of combination waste and vent systems. | 8/7/2024 | | |
| 911.0 Circuit Venting. 911.1 Circuit Vent Permitted. A maximum of eight fixtures connected to a horizontal branch drain shall be permitted to be circuit vented. Each fixture drain shall connect horizontally to the horizontal branch being circuit vented. The horizontal branch drain shall be classified as a vent from the most downstream fixture drain connection to the most upstream fixture drain connection to the horizontal branch. | 8/7/2024 8/7/2024 | | |
| 911.2 Vent Size and Connection. The circuit vent shall be not less than 2 | 8/7/2024 8/7/2024 | | |
| inches (50 mm) in diameter, and the connection shall be located between the two most upstream fixture drains. The vent shall connect to the horizontal branch on the vertical. The circuit vent pipe shall not receive the discharge of soil or waste. | | | |

Page 41 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|---|--------------------------------|------------------------------------|----------------------------------|
| | 8/7/2024 | | |
| 911.4 Relief Vent. A 2 inch (50 mm) relief vent shall be provided for circuit-vented horizontal branches receiving the discharge of four or more water closets and connecting to a drainage stack that receives the discharge of soil or waste from upper horizontal branches. | 8/7/2024 | | |
| 911.4.1 Connection and Installation. The relief vent shall connect to the horizontal branch drain between the stack and the most downstream fixture drain of the circuit vent. The relief vent shall be installed on the vertical to the horizontal branch. | 8/7/2024 | | |
| 911.4.2 Fixture Drain or Branch. The relief vent is permitted to be a fixture drain or fixture branch for a fixture located within the same branch interval as the circuit-vented horizontal branch. The discharge to a relief vent shall not exceed 4 fixture units. | 8/7/2024 | | |
| 911.3 Slope and Size of Horizontal Branch. The slope of the vent section of the horizontal branch drain shall be not more than 1 inch per foot (83.3 mm/m). The entire length of the vented section of the horizontal branch drain shall be sized for the total drainage discharge to the branch. | 8/7/2024 | | |
| | 8/7/2024 | | |
| | 8/7/2024 | | |

Page 42 of 68

| 2020 MPC 4714 | Date of Committee review | Plumbing Board Action/ comments | (A)ccept (R)eject (M)odify |
|--|--------------------------------|------------------------------------|----------------------------------|
| 911.5 Additional Fixtures. Fixtures, other than the circuit vented fixtures, are permitted to discharge to the horizontal branch drain. Such fixtures shall be located on the same floor as the circuit-vented fixtures and shall be either individually or common vented. | 8/7/2024 | | |
| 912.0 Engineered Vent System. | 8/7/2024 | | |
| 912.1 General. The design and sizing of a vent system shall be permitted to be determined by accepted engineering practices. The system shall be designed by a registered design professional and approved in accordance with Section 301.5. | 8/7/2024 | | |
| 912.2 Minimum Requirements. An engineered vent system shall provide protection of the trap seal in accordance with Section 901.3. | 8/7/2024 | | |

| 163 | 1009.2 | | Approval | Keep as amended in the MPC 2020 | 8/7/2024 | 1009.2 Approval. The size, type, and location of each interceptor (clarifier) or separator shall meet the requirements of this chapter. Exception: Interceptors or separators that are engineered and manufactured and are documented by the manufacturer and the project registered professional engineer to be properly designed and sized for the specific project, and are approved by the Authority Having Jurisdiction. No wastes other than those requiring treatment or separation shall be discharged into an interceptor (clarifier) or separator unless specifically permitted elsewhere in this code. | | |
| 164 | 1009.4 | | Relief Vent | Leave as amended in the 2020 MPC. | 8/7/2024 | specifically permitted elsewhere in this code? | | |
| 165 | 1010.1 | | Slaughterhouses, Packing Establishments. | Leave as amended in the 2020 MPC. | 8/7/2024 | 1010.1 Slaughterhouses. Slaughtering and dressing room drains shall be equipped with separators or interceptors approved by the administrative authority, which shall prevent the discharge into the drainage system of feathers, entrails, or other material likely to clog the drainage system. | | |
| 166 | 1014.1 | | General | Leave as amended in the 2020 MPC with the addition of ANSI/CAN/IAPMO Z1001 | 8/7/2024 | 1014.1 General. Where it is determined by the Authority Having Jurisdiction that waste pretreatment is required, an approved type of grease interceptor(s) complies with ASME A112.14.3, ASME A112.14.4, CSA B481, PDI G-101, ANSI/CAN/IAPMO 21001 or PDI G-102, and sized in accordance with Section 1014.2.1 or Section 1014.3.6, shall be installed in accordance with the manufacturer's installation instructions to receive the drainage from fixtures or equipment that produce grease-laden waste located in areas of establishments where food is prepared, or other establishments where grease is introduced into the drainage or sewage system in quantities that can effect line stoppage or hinder sewage treatment or private sewage disposal systems. A combination of hydromechanical, gravity grease interceptors and engineered systems shall be allowed to meet this code and other applicable requirements of the Authority Having Jurisdiction where space or existing physical constraints of existing buildings necessitate such installations. A grease interceptor shall not be required for individual dwelling units or private living quarters. Water closets, urinals, and other plumbing fixtures conveying human waste shall not drain into or through the grease interceptor. | | |

Gravity grease interceptors shall be designed to remove grease from effluent and shall be sized in accordance with this section. Gravity grease interceptors shall also be designed to retain grease until accumulations can be removed by pumping the interceptor. When provided, a sample box shall be located at the outlet end of gravity grease interceptors so that the Authority Having Jurisdiction can periodically sample effluent quality. Each gravity grease interceptor installation must pass a manometer test with one inch of water column for five minutes or a vacuum test with two inches of mercury for 60 minutes. | | |

|--|--------------------------------|----------------------------------|
| 1101.12.2.2.1 Separate Piping System. The secondary roof | | |
| drainage system shall be a separate system of piping, independent | | |
| of the primary roof drainage system. The discharge shall be <u>a</u> | | |
| maximum of 60" above grade, in a location observable by the | | |
| building occupants or maintenance personnel. Secondary roof | | |
| drain systems shall be sized in accordance with Section 1101.12.1 | | |
| based on the rainfall rate for which the primary system is sized. | | |
| 1101.12.2.2.2 Combined System. The seondary roof drains shall | | |
| connect to the vertical piping of the primary storm drainage | | |
| conductor downstream of the last horizontal offset located below | | |
| the roof. The primary storm drainage system shall connect to the | | |
| building storm water that connects to an underground public | | |
| storm sewer. The combined secondary and primary roof drain | | |
| systems shall be sized in accordance with Section 1103.0 based | | |
| on double the rainfall rate for the local area.required by 1103.0. | | |
| 1101.12.2.2.3 Notification. Where secondary roof drains are | | |
| connected according to 1101.12.2.2.2, the secondary roof drainge | | |
| system shall be provided with means to provide automatic | | |
| notification of flow in the secondary system. This system shall | | |
| provide notification at all times to a person responsible for | | |
| building maintenance or the building owner. | | |
| | | |

| 1105.0 Controlled-Flow Roof Drainage. | | |
| 1105.1 Application. The controlled-flow roof drainage system shall be sized on the basis of controlled flow and storage of the storm water on the roof, provided the design is based on a minimum of 4 inches per hour and the following conditions are met: (1) The water from a 25-year-frequency storm shall not be stored on the roof for more than 24 hours. | | |
| (2) During the storm, the water depth on the roof shall not exceed the depths specified in Table 1105.1(1). (3) Not less than two drains shall be installed in roof areas of 10 000 square feet (929 m2) or less, and not less than one additional drain shall be installed for each additional 10 000 square feet (929 m2) or less of roof area. | | |
| (4) Each roof drain shall have a precalibrated, fixed (nonadjustable), and proportional weir (notched) in a standing water collar inside the strainer. No mechanical devices or valves shall be allowed. | | |
| (5) Pipe sizing shall be based on the precalibrated rate of flow (gpm) (L/s) of the precalibrated weir for the maximum allowable water depth, and Tables 1103.1 and 1103.2. | | |
| (6) The height of stones or other granular material above the waterproofed surface shall not be considered in water depth measurement, and the roof surface in the vicinity of the drain shall not be recessed to create a reservoir. | | |
| (7) Roof design, where controlled-flow roof drainage is used, shall be such that the design roof live load is not less than 40 lb/ft2. | | |

Page 60 of 68

|---|--------------------------------|----------------------------------|
| (8) Scuppers shall be provided in parapet walls. The distance of | | |
| scupper bottoms above the roof level at the drains shall not | | |
| exceed the maximum distances specified in Table 1105.1(2). | | |
| (9) Scupper openings shall be not less than 4 inches (102 mm) high | | |
| and have a width equal to the circumference of the roof drain | | |
| required for the area served, sized in accordance with Table | | |
| 1103.1. | | |
| (10) Flashings shall extend above the top of the scuppers. | | |
| (11) At a wall or parapet, 45 degree (0.79 rad) cants shall be installed. | | |
| (12) Separate storm and sanitary drainage systems shall be | | |
| (13) Calculations for the roof drainage system shall be submitted, | | |
| along with the plans, to the Authority Having Jurisdiction for | | |
| approval. | | |
| | | |
| | | |
| | | |
| 1107.2 Methods of Testing Storm Drainage Systems. Except for | | |
| outside leaders and perforated or open-jointed drain tile, the | | |
| piping of storm drain systems shall be tested upon completion of | | |
| the rough piping installation by water or air, except that plastic | | |
| pipe shall not be tested with air, and proved tight. The Authority | | |
| Having Jurisdiction shall be permitted to require the removal of | | |
| cleanout plugs to ascertain whether the pressure has reached | | |
| parts of the system. One of the following test methods shall be | | |
| used in accordance with Section 1107.2.1 through Section | | |
| 1107.2.3. | | |
| | | |

| 11 | | 1101.6.1 Discharge. | Keep As shown in 2024 UPC | 1101.6.1 Discharge. Subsoil drains shall be piped to a storm drain, to an approved water course, to the front street curb or gutter, to an alley, or the discharge from the subsoil drains shall be conveyed to the alley by a concrete gutter. Where a continuously flowing spring or groundwater is encountered, subsoil drains shall be piped to a storm drain or an approved water course. | gutter. Where a continuously flowing spring or groundwater is encountered, subsoil drains shall be piped to a storm drain or an approved water course. | 9/4/2024 | | |
| 12 | | 1101.6.2 Sump. | Keep As shown In 2024 UPC | 1101.6.2 Sump. Where it is not possible to convey the drainage by gravity, subsoil drains shall discharge to an accessible sump provided with an approved automatic electric pump. The sump shall be not less than 15 inches (381 mm) in diameter, 18 inches (457 mm) in depth, and provided with a fitted cover. The sump pump shall have an adequate capacity to discharge water coming into the sump as it accumulates to the required discharge point, and the capacity of the pump shall be not less than 15 gallons per minute (gpm) (0.95 L/s). The discharge piping from the sump pump shall be not less than 11/2 inches (40 mm) in diameter and have a union or other approved quick-disconnect assembly to make the pump accessible for servicing. | gallons per minute (gpm) (0.95 L/s). The discharge piping | 9/4/2024 | | |
| 13 | | 1101.6.3 Splash Blocks. | Keep As shown in 2024 UPC | 1101.6.3 Splash Blocks. For separate dwellings not serving continuously flowing springs or groundwater, the sump discharge pipe shall be permitted to discharge onto a concrete splash block with a minimum length of 24 inches (610 mm). This pipe shall be within 4 inches (102 mm) of the splash block and positioned to direct the flow parallel to the recessed line of the splash block. | 1101.6.3 Splash Blocks. For separate dwellings not serving continuously flowing springs or groundwater, the sump discharge pipe shall be permitted to discharge onto a concrete splash block with a minimum length of 24 inches (610 mm). This pipe shall be within 4 inches (102 mm) of the splash block and positioned to direct the flow parallel to the recessed line of the splash block. | 9/4/2024 | | |
| 14 | | 1101.6.4 Backwater Valve | Keep As shown In 2024 UPC | 1101.6.4 Backwater Valve. Subsoil drains subject to backflow where discharging into a storm drain shall be provided with a backwater valve in the drain line so located as to be accessible for inspection and maintenance. | 1101.6.4 Backwater Valve. Subsoil drains subject to backflow where discharging into a storm drain shall be provided with a backwater valve in the drain line so located as to be accessible for inspection and maintenance. | 9/4/2024 | | |
| 15 | | 1101.6.5 Open Area. | Keep As shown In 2024 UPC | 1101.6.5 Open Area. Nothing in Section 1101.6 shall prevent drains that serve either subsoil drains or areaways of a detached building from discharging to a properly graded open area, provided that: | 1101.6.5 Open Area. Nothing in Section 1101.6 shall prevent drains that serve either subsoil drains or areaways of a detached building from discharging to a properly graded open area, provided that: | 9/4/2024 | | |
| 16 | | | Keep As shown In 2024 UPC | (1) They do not serve continuously flowing springs or groundwater. | (1) They do not serve continuously flowing springs or groundwater. | 9/4/2024 | | |
| 17 | | | Keep As shown In 2024 UPC | (2) The point of discharge is not less than 10 feet (3048 mm) from a property line. | (2) The point of discharge is not less than 10 feet (3048 mm) from a property line. | 9/4/2024 | | |
| 18 | | | Keep As shown In 2024 UPC | (3) It is impracticable to discharge such drains to a storm drain, to an approved water course, to the front street curb or gutter, or to an alley. | (3) It is impracticable to discharge such drains to a storm drain, to an approved water course, to the front street curb or gutter, or to an alley. | 9/4/2024 | | |
| 19 | | 1101.7 Building Subdrains. | Keep As shown In 2024 UPC | 1101.7 Building Subdrains. Building subdrains located below the public sewer level shall discharge into a sump or receiving tank, the contents of which shall be automatically lifted and discharged into the drainage system as required for building sumps. | 1101.7 Building Subdrains. Building subdrains located below the public sewer level shall discharge into a sump or receiving tank, the contents of which shall be automatically lifted and discharged into the drainage system as required for building sumps. | 9/4/2024 | | |

| 21 | | 1101.9 Window Areaway Drains. | Keep As shown In 2024 UPC | 1101.9 Window Areaway Drains. Window areaways at a maximum of 10 square feet (0.93 m2) in area shall be permitted to discharge to the subsoil drains through a 2 inch (50 mm) diameter pipe. However, window areaways exceeding 10 square feet (0.93 m2) in area shall be handled in the manner provided for entrance areaways (see Section 1101.8). | 1101.9 Window Areaway Drains. Window areaways at a maximum of 10 square feet (0.93 m2) in area shall be permitted to discharge to the subsoil drains through a 2 inch (50 mm) diameter pipe. However, window areaways exceeding 10 square feet (0.93 m2) in area shall be handled in the manner provided for entrance areaways (see Section 1101.8). | 9/4/2024 | | |
| 22 | | 1101.10 Filling Stations and Motor Vehicle Washing Establishments. | Keep As shown In 2024 UPC | 1101.10 Filling Stations and Motor Vehicle Washing Establishments. Public filling stations and motor vehicle washing establishments shall have the paved area sloped toward sumps or gratings within the property lines. Curbs not less than 6 inches (152 mm) high shall be placed where required to direct water to gratings or sumps. | 1101.10 Filling Stations and Motor Vehicle Washing Establishments. Public filling stations and motor vehicle washing establishments shall have the paved area sloped toward sumps or gratings within the property lines. Curbs not less than 6 inches (152 mm) high shall be placed where required to direct water to gratings or sumps. | 9/4/2024 | | |
| 23 | | 1101.11 Paved Areas. | Keep As shown In 2024 UPC | 1101.11 Paved Areas. Where the occupant creates surface water drainage, the sumps, gratings, or floor drains shall be piped to a storm drain or an approved water course. | 1101.11 Paved Areas. Where the occupant creates surface water drainage, the sumps, gratings, or floor drains shall be piped to a storm drain or an approved water course. | 9/4/2024 | | |
| 24 | | 1101.12 Roof Drainage | Keep As shown In 2024 UPC | 1101.12 Roof Drainage. Roof drainage shall comply with Section 1101.12.1 and Section 1101.12.2. | 1101.12 Roof Drainage. | 9/4/2024 | | |
| 25 | | 1101.13 Cleanouts. | Keep As shown In 2024 UPC | 1101.13 Cleanouts. Cleanouts for building storm drains shall comply with the requirements of Section 719.0 of this code. | 1101.13 Cleanouts. Cleanouts for building storm drains shall comply with the requirements of Section 719.0 of this code. | 9/4/2024 | | |
| 26 | | 1101.13.1 Rain Leaders and Conductors. | Keep As shown In 2024 UPC | 1101.13.1 Rain Leaders and Conductors. Rain leaders and conductors connected to a building storm sewer shall have a cleanout installed at the base of the leader or conductor before it connects to the horizontal drain. | 1101.13.1 Rain Leaders and Conductors. Rain leaders and conductors connected to a building storm sewer shall have a cleanout installed at the base of the outside leader or outside conductor before it connects to the horizontal drain. | 9/4/2024 | | |
| 27 | | 1101.14 Rainwater Sumps | Keep As shown In 2024 UPC | 1101.14 Rainwater Sumps. Rainwater sumps serving "public use" occupancy buildings shall be provided with dual pumps arranged to function alternately in the case of overload or mechanical failure. Pumps rated 600 V or less shall comply with UL 778 and shall be installed in accordance with the manufacturer's installation instructions. | 1101.14 Rainwater Sumps. Rainwater sumps serving "public use" occupancy buildings shall be provided with dual pumps arranged to function alternately in the case of overload or mechanical failure. Pumps rated 600 V or less shall comply with UL 778 and shall be installed in accordance with the manufacturer's installation instructions. | 9/4/2024 | | |

| 28 | | 1101.15 Traps on Storm Drains and Leaders. | Keep As shown In 2024 UPC | 1101.15 Traps on Storm Drains and Leaders. Leaders and storm drains, where connected to a combined sewer, shall be trapped. Floor and area drains connected to a storm drain shall be trapped. Exception: Traps shall not be required where roof drains, rain leaders, and other inlets are at locations permitted under Section 906.0, Vent Termination. | 1101.15 Traps on Storm Drains and Leaders. Leaders and storm drains, where connected to a combined sewer, shall be trapped. Floor and area drains connected to a storm drain shall be trapped. Exception: Traps shall not be required where roof drains, rain leaders, and other inlets are at locations permitted under Section 906.0, Vent Termination. | 9/4/2024 | | |
| 29 | | 1101.15.1 Where Not Required. | Keep As shown In 2024 UPC | 1101.15.1 Where Not Required. No trap shall be required for leaders or conductors that are connected to a sewer carrying storm water exclusively. | 1101.15.1 Where Not Required. No trap shall be required for leaders or conductors that are connected to a sewer carrying storm water exclusively. | 9/4/2024 | | |
| 30 | | 1101.15.2 Trap Size. | Keep As shown In 2024 UPC | 1101.15.2 Trap Size. Traps, where installed for individual conductors, shall be the same size as the horizontal drain to which they are connected. | 1101.15.2 Trap Size. Traps, where installed for individual conductors, shall be the same size as the horizontal drain to which they are connected. | 9/4/2024 | | |
| 31 | | 1101.15.3 Method of Installation of Combined Sewer. Individual | Keep As shown In 2024 UPC | 1101.15.3 Method of Installation of Combined Sewer. Individual storm-water traps shall be installed on the stormwater drain branch serving each storm-water inlet, or a single trap shall be installed in the main storm drain just before its connection with the combined building sewer. Such traps shall be provided with an accessible cleanout on the outlet side of the trap. | 1101.15.3 Method of Installation of Combined Sewer. Individual storm-water traps shall be installed on the stormwater drain branch serving each storm-water inlet, or a single trap shall be installed in the main storm drain just before its connection with the combined building sewer. Such traps shall be provided with an accessible cleanout on the outlet side of the trap. | 9/4/2024 | | |
| 32 | | 1101.16 Leaders, | Keep As shown In 2024 UPC | 1101.16 Leaders, Conductors, and Connections. Leaders or conductors shall not be used as soil, waste, or vent pipes nor shall soil, waste, or vent pipes be used as leaders or conductors. | 1101.16 Leaders, Conductors, and Connections. Leaders or conductors shall not be used as soil, waste, or vent pipes nor shall soil, waste, or vent pipes be used as leaders or conductors. | 9/4/2024 | | |
| 33 | | 1101.16.1 Protection of Leaders | Keep As shown In 2024 UPC | 1101.16.1 Protection of Leaders. Leaders installed along alleyways, driveways, or other locations where exposed to damage shall be protected by metal guards, recessed into the wall, or constructed from the ferrous pipe. | 1101.16.1 Protection of Leaders. Leaders installed along alleyways, driveways, or other locations where exposed to damage shall be protected by metal guards, recessed into the wall, or constructed from the ferrous pipe. | 9/4/2024 | | |
| 34 | | 1101.16.2 Combining Storm with Sanitary Drainage. | Keep As shown In 2024 UPC | 1101.16.2 Combining Storm with Sanitary Drainage. The sanitary and storm drainage system of a building shall be entirely separate, except where a combined sewer is used, in which case the building storm drain shall be connected in the same horizontal plane through a single wye fitting to the combined building sewer not less than 10 feet (3048 mm) downstream from a soil stack. | 1101.16.2 Combining Storm with Sanitary Drainage. The sanitary and storm drainage system of a building shall be entirely separate, except where a combined sewer is used, in which case the building storm drain shall be connected in the same horizontal plane through a single wye fitting to the combined building sewer not less than 10 feet (3048 mm) downstream from a soil stack. | 9/4/2024 | | |
| 35 | | 1102.0 Roof Drains. | Keep As shown In 2024 UPC | 1102.0 Roof Drains. | 1102.0 Roof Drains. | 9/4/2024 | | |
| 36 | | 1102.1 Applications. | Keep As shown In 2024 UPC | 1102.1 Applications. Roof drains shall be constructed of aluminum, cast-iron, copper alloy of not more than 15 percent zinc, leaded nickel bronze, stainless steel, ABS, PVC, polypropylene, polyethylene, or nylon and shall comply with ASME A112.3.1 or ASME A112.6.4. | 1102.1 Applications. Roof drains shall be constructed of aluminum, cast-iron, copper alloy of not more than 15 percent zinc, leaded nickel bronze, stainless steel, ABS, PVC, polypropylene, polyethylene, or nylon and shall comply with ASME A112.3.1 or ASME A112.6.4. | 9/4/2024 | | |
| 37 | | 1102.2 Dome Strainers Required. | Keep As shown In 2024 UPC | 1102.2 Dome Strainers Required. Roof drains shall have domed strainers. Exception: Roof drain strainers for use on sun decks, parking decks, and similar areas that are normally serviced and maintained, shall be permitted to be of the flat surface type. Such roof drain strainers shall be level with the deck. | 1102.2 Dome Strainers Required. Roof drains shall have domed strainers. Exception: Roof drain strainers for use on sun decks, parking decks, and similar areas that are normally serviced and maintained, shall be permitted to be of the flat surface type. Such roof drain strainers shall be level with the deck. | | | |
| 38 | | 1102.3 Roof Drain Flashings. | Keep As shown In 2024 UPC | 1102.3 Roof Drain Flashings. The connection between the roof and roof drains that pass through the roof and into the interior of the building shall be made watertight by the use of proper flashing material. Page 65 of 68 | 1102.3 Roof Drain Flashings. The connection between the roof and roof drains that pass through the roof and into the interior of the building shall be made watertight by the use of proper flashing material. | | | |

| Line # | Rules affected | Brief Title | Proposal and Committee recommendation | 2024 UPC | 2020 MPC 4714 | Date of Committee review | Plumbing Board action/comments | (A)ccept (R)eject (M)odify |
| 39 | 1 | 102.3.1 Lead Flashing. | • | 1102.3.1 Lead Flashing. Where lead flashing material is used, it shall be not less than 4 pounds per square foot (lb/ft2) (19 kg/m2). | 1102.3.1 Lead Flashing. Where lead flashing material is used, it shall be not less than 4 pounds per square foot (lb/ft2) (19 kg/m2). | 9/4/2024 | | |
| 40 | 11 | .02.3.2 Copper Flashing. | Keep As shown In 2024 UPC | 1102.3.2 Copper Flashing. Where copper flashing material is used, it shall be not less than 12 ounces per square foot (oz/ft2) (3.7 kg/m2). | 1102.3.2 Copper Flashing. Where copper flashing material is used, it shall be not less than 12 ounces per square foot (oz/ft2) (3.7 kg/m2). | 9/4/2024 | | |
| 41 | Lead | 103.0 Size of lers, Conductors, d Storm Drains. | Keep As shown In 2024 UPC | 1103.0 Size of Leaders, Conductors, and Storm Drains. | 1103.0 Size of Leaders, Conductors, and Storm Drains. | 9/4/2024 | | |
| 42 | 110 | 3.3 Size of Roof Gutters. | Keep As shown In 2024 UPC | 1103.3 Size of Roof Gutters. The size of semi-circular gutters shall be based on the maximum projected roof area and Table 1103.3. | NA | 9/4/2024 | | |
| 43 | | 03.4 Side Walls raining onto a Roof. | Keep As shown In 2024 UPC | 1103.4 Side Walls Draining onto a Roof. Where vertical walls project above a roof to permit storm water to drain into the roof area below, the adjacent roof area shall be permitted to be computed from Table 1103.1 as follows: | 1103.4 Side Walls Draining onto a Roof. Where vertical walls project above a roof to permit storm water to drain into the roof area below, the adjacent roof area shall be permitted to be computed from Table 1103.1 as follows: | 9/4/2024 | | |
| 44 | | | Keep As shown In 2024 UPC | (1) For one wall – add 50 percent of the wall area to the roof area figures. | (1) For one wall – add 50 percent of the wall area to the roof area figures. | 9/4/2024 | | |
| 45 | | | Keep As shown In 2024 UPC | (2) For two adjacent walls of equal height – add 35 percent of the total wall areas. | (2) For two adjacent walls of equal height – add 35 percent of the total wall areas. | 9/4/2024 | | |
| 46 | | | Keep As shown In 2024 UPC | (3) For two adjacent walls of unequal height – add 35 percent of the total common height and add 50 percent of the remaining height of the highest wall. | (3) For two adjacent walls of unequal height – add 35 percent of the total common height and add 50 percent of the remaining height of the highest wall. | 9/4/2024 | | |
| 47 | | | Keep As shown In 2024 UPC | (4) Two opposite walls of same height – add no additional area. | (4) Two opposite walls of same height – add no additional area. | 9/4/2024 | | |
| 48 | | | Keep As shown In 2024 UPC | (5) Two opposite walls of differing heights – add 50 percent of the wall area above the top of the lower wall. | (5) Two opposite walls of differing heights – add 50 percent of the wall area above the top of the lower wall. | 9/4/2024 | | |
| 49 | | | Keep As shown In 2024 UPC | (6) Walls on three sides – add 50 percent of the area of the inner wall below the top of the lowest wall, plus an allowance for the area of the wall above the top of the lowest wall, in accordance with Section 1103.4(3) and Section 1103.4(5) above. | (6) Walls on three sides – add 50 percent of the area of the inner wall below the top of the lowest wall, plus an allowance for the area of the wall above the top of the lowest wall, in accordance with Section 1103.4(3) and Section 1103.4(5) above. | 9/4/2024 | | |
| 50 | | | Keep As shown In 2024 UPC | (7) Walls on four sides – no allowance for wall areas below the top of the lowest wall – add for areas above the top of the lowest wall in accordance with Section 1103.4(1), Section 1103.4(3), Section 1103.4(5), and Section 1103.4(6) above. | (7) Walls on four sides – no allowance for wall areas below the top of the lowest wall – add for areas above the top of the lowest wall in accordance with Section 1103.4(1), Section 1103.4(3), Section 1103.4(5), and Section 1103.4(6) above. | 9/4/2024 | | |
| 51 | R(LE | LE 1103.1 SIZING OOF DRAINS, EADERS, AND VERTICAL RAINWATER PIPING2, 3 | Keep As shown In 2024 UPC | TABLE 1103.1 SIZING ROOF DRAINS, LEADERS, AND VERTICAL RAINWATER PIPING2, 3 | | 9/4/2024 | | |
| 52 | 110 | 04.0 Values for ntinuous Flow. | Keep As shown In 2024 UPC | 1104.0 Values for Continuous Flow. | 1104.0 Values for Continuous Flow. | 9/4/2024 | | |
| 53 | | 104.1 General. | Keep As shown In 2024 UPC | 1104.1 General. Where there is a continuous or semi-continuous discharge into the building storm drain or building storm sewer, as from a pump, ejector, air-conditioning plant, or similar device, 1 gpm (0.06 L/s) of such discharge shall be computed as being equivalent to 24 square feet (2.2 m2) of roof area, based upon a rate of rainfall of 4 inches per hour (in/h) (102 mm/h). | 1104.1 General. Where there is a continuous or semi- continuous discharge into the building storm drain or building storm sewer, as from a pump, ejector, air- conditioning plant, or similar device, 1 gpm (0.06 L/s) of such discharge shall be computed as being equivalent to 24 square feet (2.2 m2) of roof area, based upon a rate of rainfall of 4 inches per hour (in/h) (102 mm/h). | 9/4/2024 | | |

| 54 | | 1105.0 Controlled- Flow Roof Drainage. | Keep As shown In 2024 UPC | 1105.0 Controlled-Flow Roof Drainage. | 1105.0 Controlled-Flow Roof Drainage. | 9/4/2024 | | |
| 55 | | TABLE 1105.1(1) CONTROLLED-FLOW MAXIMUM ROOF WATER DEPTH | Keep As shown In 2024 UPC | TABLE 1105.1(1) CONTROLLED-FLOW MAXIMUM ROOF WATER DEPTH | TABLE 1105.1(1) CONTROLLED-FLOW MAXIMUM ROOF WATER DEPTH | 9/4/2024 | | |
| 56 | | TABLE 1105.1(2) DISTANCE OF SCUPPER BOTTOMS ABOVE ROOF | Keep As shown in 2024 UPC | TABLE 1105.1(2) DISTANCE OF SCUPPER BOTTOMS ABOVE ROOF | TABLE 1105.1(2) DISTANCE OF SCUPPER BOTTOMS ABOVE ROOF | 9/4/2024 | | |
| 57 | | 1105.2 Setback Roofs. | Keep As shown In 2024 UPC | 1105.2 Setback Roofs. Drains on setback roofs shall be permitted to be connected to the controlled-flow drainage systems provided: | 1105.2 Setback Roofs. Drains on setback roofs shall be permitted to be connected to the controlled-flow drainage systems provided: | 9/4/2024 | | |
| 58 | | | Keep As shown In 2024 UPC | (1) The setback is designed for storing water, or | (1) The setback is designed for storing water, or | 9/4/2024 | | + |
| 59 | | | Keep As shown in 2024 UPC | (2) The square footage of the setback drainage area is converted as outlined in Section 1105.0 to gpm, and the storm-water pipe sizes in the controlled-flow system are based on the sum of the loads. | (2) The square footage of the setback drainage area is converted as outlined in Section 1105.0 to gpm, and the storm-water pipe sizes in the controlled-flow system are based on the sum of the loads. | 9/4/2024 | | |
| 60 | | | Keep As shown In 2024 UPC | (3) The branch from each of the roof drains that are not provided with controlled flow shall be sized in accordance with Table 1103.1. | (3) The branch from each of the roof drains that are not provided with controlled flow shall be sized in accordance with Table 1103.1. | 9/4/2024 | | |
| 61 | | 1106.0 Engineered Storm Drainage System. | Keep As shown In 2024 UPC | 1106.0 Engineered Storm Drainage System. | | 9/4/2024 | | |
| 62 | | 1106.1 General. | Keep As shown In 2024 UPC | 1106.1 General. The design and sizing of a storm drainage system shall be permitted to be determined by accepted engineering practices. The system shall be designed by a registered design | | 9/4/2024 | | |
| 63 | | 1106.2 Siphonic Roof Drainage Systems. | Keep As shown In 2024 UPC | professional and approved in accordance with Section 301.5. 1106.2 Siphonic Roof Drainage Systems. The design of a siphonic roof drainage system shall comply with ASPE/ANSI 45. | 1106.0 Siphonic Roof Drainage System. | 9/4/2024 | | |
| 64 | | 1106.3 Siphonic Roof Drains. | Keep As shown In 2024 UPC | 1106.3 Siphonic Roof Drains. Siphonic roof drains shall comply with ASME A112.6.9. | | 9/4/2024 | | |
| 65 | | 1107.2.1 Water Test. | Keep As shown In 2024 UPC | 1107.2.1 Water Test. After piping has been installed, the water test shall be applied to the drainage system, either to the entire system or sections. Where the test is applied to the entire system, all openings in the piping shall be tightly closed except for the highest opening, and the system shall be filled with water to the point of overflow. Where the system is tested in sections, each opening shall be tightly plugged except for the highest opening of the section under test, and each section shall be filled with water, but no section shall be tested with less than a 10 foot (3048 mm) head of water. In testing successive sections, not less than the upper 10 feet (3048 mm) of the next preceding section shall be tested so that no joint of pipe in the building except the uppermost 10 feet (3048 mm) of a roof drainage system, which shall be filled with water to the flood level of the uppermost roof drain, shall have been submitted to a test of less than 10 foot (3048 mm) head of water. The water shall be kept in the system or the portion of the test for not less than 15 minutes before inspection starts; the system shall then be tight. | foot (3048 mm) head of water. In testing successive sections, not less than the upper 10 feet (3048 mm) of the next preceding section shall be tested so that no joint of | 9/4/2024 | | |

| 66 | | 1107.2.2 Air Test. | Keep As shown in 2024 UPC | 1107.2.2 Air Test. The air test shall be made by attaching an air compressor testing apparatus to a suitable opening after closing other inlets and outlets to the system, forcing air into the system until there is a uniform gauge pressure of 5 pounds-force per square inch (psi) (34 kPa) or sufficient pressure to balance a column of mercury 10 inches (34 kPa) in height. This pressure shall be held without the introduction of additional air for not less than 15 minutes. | an air compressor testing apparatus to a suitable opening after closing other inlets and outlets to the system, forcing air into the system until there is a uniform gauge pressure of 5 pounds-force per square inch (psi) (34 kPa) or sufficient pressure to balance a column of mercury 10 inches (34 kPa) in height.
